NSF Performance Summary Report

From May 01, 2026 To June 01, 2026

60 **BATANGAS MEDICAL CENTER**

FROM: Angelita U. Vanguardia RN, MAN - Program Manager

NOTED BY: Alma Panganiban - Andal, MD - Unit Head

UNFIT AND UNSAT FACILITY PERFORMANCE

Summary	Breakdown	Count per Category	Ave. AOC per Category	Unsatisfactory Samples
Total Samples: 358	Inborn Total:	340	1.34	Contaminated: 6 Insufficient: 4 Less Than 24 Hours: 8 Missing Information: 1 Total Unsat Count: 19 Total Unsat Rate: 5.31%
Average AOC: 1.35	Outborn Total:	18	1.72	
Ave. Trans. Time: 2.72	Homebirth:	0		
	HOB Not Equals To HOC	13		
	Unknown:	5		

Your facility has reached **unacceptable** unfit and Unsatisfactory rate of 5.31%. Proper collection and complete demographic data is very crucial in the NBS process. Unsatisfactory samples are costly and may cause false positive or negative results. These may cause delay in the testing and diagnosis of an affected baby that could lead to possible irreversible damage.

We will conduct an unannounced facility visit to further inspect your process and address the issues to improve the NBS program implementation in your facility. The result of monitoring will be forwarded to Department of Health Regional Office for proper assessment.

REMEMBER: The goal is to have less than 1 percent (<1%) unfit / unsatisfactory rate!
